

# Diego Villagran Salazar

DevOps Engineer | Containerization | Observability

diegovillasal@gmail.com | +52 55 7207 1183 | [www.dvillagrans.dev](http://www.dvillagrans.dev) | [LinkedIn](#) | [GitHub](#)

## Professional Summary

Engineer with hands-on experience designing and operating containerized services, CI/CD pipelines, observability, and operational automation. Achieved 99.5% uptime across 8+ services with Docker Compose, improved deployment time by 50% with automated pipelines, and reduced recovery time from 2 hours to 15 minutes with a 3-2-1 backup strategy. Seeking a DevOps role focused on platform reliability, scalability, and developer velocity.

## Education

Bachelor of Science in Data Science

Superior School of Computer Science (ESCOM-IPN)

2022 – 2026 (December)

Mexico City, Mexico

- Maintained GPA of 8.5/10.0 while completing 45+ credit hours in advanced coursework
- Focused on Systems Engineering, Data Engineering, and Distributed Systems

## Professional Experience

AI & Automation Intern

EyeNet

April 2025 – Present

Remote

- Built CI/CD pipelines and proactive monitoring/alerting, reducing deployment time by 50% and preventing 95%+ of incidents before production
- Designed and operated containerized data services with PostgreSQL, Redis, and MongoDB, scaling to 10K+ daily requests with health checks and resource limits
- Automated data workflows with Python and orchestration to process 300+ documents per day with 92% extraction accuracy
- Implemented backup and restore procedures and playbooks to accelerate recovery and reduce operational toil

## Projects

Microservices Orchestration & Monitoring

Platform Engineering Project

2025

- Deployed 8+ services (PostgreSQL, Redis, Nginx, APIs) using Docker Compose with automated health checks, achieving 99.5% uptime
- Implemented 3-2-1 backups with pg\_dump and rsync, reducing recovery time from 2 hours to 15 minutes
- Built observability stack with Grafana and Prometheus tracking 25+ metrics; performed load testing with Apache Bench to reduce latency by 40%

Qalma - Reliable Data Platform

Infra & Reliability

2025

- Designed cloud data infrastructure on Supabase/PostgreSQL with 99.9% uptime and automated maintenance tasks
- Hardened services with containerization, network reverse proxy (Nginx), and runtime monitoring

## Technical Skills

**DevOps & Platform:** Docker, Docker Compose, Nginx, CI/CD, Git, Linux Administration, Shell Scripting

**Observability:** Prometheus, Grafana, Health Checks, Log Aggregation, Alerting

**Databases & Storage:** PostgreSQL, MongoDB, Redis, Backups & Recovery, Performance Tuning

**Cloud & Networking:** AWS, Azure, Reverse Proxying, TLS Termination

**Automation:** Python, Orchestration Workflows, ETL for Ops Data

## Certifications & Languages

**Certifications:** Manage Kubernetes in Google Cloud, Build a Data Warehouse with BigQuery, Engineer Data for Predictive Modeling with BigQuery ML, Google AI Essentials (Coursera)

**Languages:** Spanish (Native proficiency), English (B2 in-course)
