Hybrid-ready

Summary

Data Science student at ESCOM-IPN (graduating December 2026). I build production AI and automation systems that drive business outcomes: reduced manual client work by 65% and process 10K+ daily requests via LLM-powered pipelines. Seeking a client-facing technical role at IBM to translate AI solutions into measurable impact.

Education

2022–2026 **Bachelor of Science in Data Science**, *Escuela Superior de Cómputo (ESCOM-IPN)*, Mexico City
GPA: 8.5/10.0.

Experience

Apr 2025 – **AI & Automation Intern**, *EyeNet*, Remote

- May 2026
- Built an end-to-end document automation pipeline (Python, n8n) that reduced manual processing by 65% (300+ docs/week).
 - Automated data extraction with OpenAI and Gemini APIs, achieving 92% extraction accuracy.
 - Architected microservices (PostgreSQL, Redis, MongoDB, Docker) handling 10K+ daily requests with 99.5% uptime.

Selected Projects

2024 **NYC Ride-Hailing Analytics**

Developed predictive model ($R^2 > 0.85$) and interactive Streamlit dashboard from 30M+ trip records.

2024 **COVID-19 Risk Profiles**

Applied K-Means and Fuzzy C-Means clustering on 30M+ health records to create 9 risk profiles used for ICU triage prioritization.

Technical Skills

Data & AI Python, TensorFlow, PyTorch, Scikit-learn, OpenAI API, Gemini API, LLaMA, Mistral, NLP

Automation n8n, ETL/ELT, CI/CD, Python scripting, Bash

Cloud AWS, Azure, Docker, Kubernetes, PostgreSQL, MongoDB, Redis

Certifications

Google AI Essentials (Coursera); Build a Data Warehouse with BigQuery (Google Cloud); BigQuery ML for Predictive Modeling; Kubernetes management.

Interest in IBM Future Club

I build technical systems and focus on measurable business impact. IBM's Data & AI and Automation portfolio maps to my experience; the Future Club is an opportunity to develop commercial and client-facing skills to scale enterprise adoption.
